

EVENTFORCE MANAGEMENT SYSTEM SALESFORCE IMPLEMENTATION

User Story:

The Smart Event Hub Management System is a comprehensive Salesforce CRM solution designed to simplify and automate event management activities. The system centralizes customer registrations, event scheduling, venue allocation, vendor coordination, payment tracking, and feedback management within a single platform. To overcome the challenges of manual event handling and disconnected records, the application uses Salesforce custom objects such as Customers, Events, Venues, Vendors, Payments, and Feedback. These objects are connected through Salesforce relationships to ensure data consistency and real-time access to information. Business processes are automated using Salesforce Flows, Apex Classes, and Triggers. The system validates venue availability, prevents duplicate bookings, sends automated reminders, and manages event cancellation approvals. Real-time reports and dashboards provide operational insights for event coordinators and administrators. The solution improves efficiency, enhances collaboration, reduces manual effort, and delivers a better experience for customers and event management teams.

1. INTRODUCTION

1.1 Project Overview:

The Smart Event Hub Management System is a cloud-based Salesforce CRM application developed to streamline and automate event planning and management operations. The system serves as a centralized platform where organizations can manage customers, events, venues, vendors, payments, and feedback effectively.

Traditional event management often involves spreadsheets, manual communication, and fragmented data storage, which can lead to scheduling conflicts, data inaccuracies, and operational delays. This project addresses these challenges by leveraging Salesforce's powerful CRM capabilities.

The application incorporates Salesforce Custom Objects, Lightning App, Flows, Apex Programming, Approval Processes, Reports, and Dashboards to automate critical business functions. Features such as venue availability validation, automated reminders, vendor assignment, and event cancellation workflows improve overall operational efficiency.

By providing a centralized and scalable solution, the Smart Event Hub Management System helps organizations manage events more effectively while improving customer satisfaction and decision-making capabilities.

1.2 Purpose:

The purpose of the Smart Event Hub Management System is to provide a centralized and automated platform for managing end-to-end event operations using Salesforce CRM technology.

The system is designed to:

- Centralize event-related information including customers, venues, vendors, payments, and feedback.
- Simplify event scheduling and booking processes through structured workflows.
- Prevent venue booking conflicts using automated validation mechanisms.
- Automate notifications, reminders, and approval processes to reduce manual effort.
- Improve communication and collaboration among customers, event coordinators, vendors, and administrators.
- Provide real-time reports and dashboards for operational monitoring and business analysis.
- Enhance customer experience through efficient event management and timely communication.
- Support organizational growth through a scalable, secure, and maintainable Salesforce-based solution.

2.2 Empathy Map Canvas

User Persona: Event Coordinator

Role: Event Coordinator

Primary Responsibility: Manage event bookings, client requirements, venue reservations, vendor coordination, reminders, and event status updates.

- **Think & Feel:** Wants to manage events smoothly, avoid booking conflicts, and provide a reliable experience to clients.
- **Hear:** Receives requirements and updates from clients, vendors, venue managers, and event administrators.
- **See:** Event details, client information, venue availability, vendor assignments, cancellations, and feedback.
- **Say & Do:** Coordinates with stakeholders, updates event records, manages bookings, follows up on requirements, and monitors event progress.
- **Pain:** Manual coordination, fragmented information, venue double-booking risks, and difficulty tracking multiple event activities.

2.3 Brainstorming & Idea Prioritization

Ideas Considered

Idea	Approach	Key Limitation
Manual Registers	Maintain event, client, venue, and vendor details manually	Time-consuming and difficult to maintain
Spreadsheet Tracking	Track bookings and event information using spreadsheets	Limited automation and real-time coordination
Standalone Portal	Develop a dedicated portal for event management	Higher development and maintenance effort

Salesforce CRM	Centralize event operations on a Salesforce platform	Requires proper configuration and implementation
----------------	--	--

Empathy Map Canvas – Event Coordinator Profile. ^[cite: 3]

Gaining user insights to engineer a superior EventForce platform. ^[cite: 3]

Brainstrome and ideas:

Final Selection

Salesforce CRM selected due to:

- **Automation:** Automates reminders, approvals, status updates, and business processes.
- **Scalability:** Supports expanding event operations, users, records, and business requirements.
- **Real-Time Visibility:** Provides centralized data, reports, and dashboards for operational monitoring.

- **Decision:** Salesforce CRM provides the best fit for creating a centralized, automated, and scalable EventForce Management System.

3. REQUIREMENT ANALYSIS PHASE

3.1 Customer Journey Map

Stage	Customer Journey Stage	What Happens
1	Event Enquiry & Client Registration	Client requirements and contact details are captured in Salesforce.
2	Event Planning & Booking	Event details such as event type, date, budget, and status are created and managed.
3	Venue Selection & Reservation	Suitable venues are identified, availability is checked, and reservations are managed while preventing double bookings.
4	Vendor Coordination	Vendors and required services are assigned to events and their availability/status is coordinated.
5	Event Confirmation & Communication	Confirmed events trigger automated communication, including reminders sent to clients before the event.

6	Event Execution & Monitoring	Event progress and operational information are monitored through Salesforce records, reports, and dashboards.
7	Cancellation & Approval	Cancellation requests are submitted through the approval process, with appropriate status updates and notifications.
8	Feedback & Closure	Client feedback is captured after the event, and completed events are updated for operational tracking and future analysis.

3.2 Solution Requirements Functional Requirements

FR No	Requirement
FR-1	Event management
FR-2	Client management
FR-3	Venue management
FR-4	Vendor management

FR-5	Event–vendor assignment
FR-6	Venue availability & double-booking prevention
FR-7	Automated event reminders
FR-8	Event cancellation approval
FR-9	Feedback management
FR-10	Reports & dashboards
FR-11	Event status automation
FR-12	Data migration through Data Import Wizard

3.2 Non-Functional Requirements

NFR	Description
Usability	Lightning App for easy event management and navigation
Security	Profile-, role-, and permission-based access control
Reliability	Accurate automation, approvals, and venue booking validation
Performance	Efficient processing of event and operational data
Availability	Cloud-based Salesforce access for authorized users
Scalability	Supports growing events, clients, vendors, venues, and users

Maintainability	Flows, Apex, validation rules, and security can be monitored and updated
Data Integrity	Validation and controlled data migration to maintain accurate records

3.3 Data Flow Diagram Flow:

3.4 Technology Stack

Layer	Technology
Platform	Salesforce CRM / Developer Edition
UI	Salesforce Lightning App

Database	Salesforce Custom Objects
Business Logic	Salesforce Flows, Formula Fields, Validation Rules
Approval	Salesforce Approval Process
Automation	Record-Triggered Flows, Apex Triggers

Processing & Security

Security: Profiles, Roles, Permission Sets, Sharing Rules, OWD

Processing	Batch Apex, Scheduled Apex
Security	Profiles, Roles, Permission Sets, Sharing Rules, OWD
Reporting	Reports & Dashboards

4. PROJECT DESIGN PHASE

4.1 Problem–Solution Fit

The EventForce Management System provides a strong fit between identified event-management problems and Salesforce capabilities. The solution combines custom data structures, automation, Apex business logic, approval processes, security controls, and reporting to address the operational challenges of event planning and coordination.

Problem	Solution – EventForce Salesforce System	Fit / Benefit
Client, event, venue, and vendor information is difficult to manage centrally	Custom Salesforce objects for Event, Client, Venue, Vendor, Feedback, and EventVendor	Centralized and structured event data

Event booking requires multiple manual activities	Salesforce Flows and automated processes	Reduces manual effort and improves process efficiency
Risk of venue double booking	Apex Trigger and VenueStatusHelper	Validates venue availability and prevents double bookings
Vendor coordination is difficult to track	EventVendor junction object and Vendor records	Supports event–vendor assignment and coordination
Clients may not receive timely event reminders	3-Day Reminder Flow	Automates reminder communication before confirmed events

Problem	Solution – EventForce Salesforce System	Fit / Benefit
Cancellation requests require controlled processing	Event_Cancellation_Process Approval Process	Provides structured approval and status updates
Client feedback needs to be connected with events	Feedback object with Event and Client relationships	Enables organized feedback management
Operational information is difficult to monitor	Reports and EventForce Operations Dashboard	Provides better visibility for monitoring and decisions
Different users require different levels of access	Profiles, Roles, Permission Sets, OWD, and Sharing Rules	Provides controlled and secure data access

4.2 Proposed Solution

Functional Requirements Overview

Parameter	Description
Problem	Manual and fragmented event management
Solution	Salesforce CRM
Innovation	Automated event reminders, venue validation, and cancellation approvals
Impact	Faster event coordination and improved operational visibility
Business Model	Centralized event planning and management
Scalability	Supports growing events, clients, vendors, venues, and users

4.3 Solution Architecture

Components:

- Event Object
- Client Object
- Vendor Object
- Venue Object
- EventVendor Junction Object
- Feedback Object
- Validation Rules
- Formula Fields
- Flows
- Approval Process
- Apex Triggers
- Apex Classes
- Batch Apex
- Scheduled Apex
- Profiles & Roles
- Permission Sets & Sharing Rules
- Data Import Wizard
- Lightning App
- Reports
- Dashboards

5. PROJECT PLANNING & SCHEDULING

5.1 Project Planning

- Agile methodology
- Epics → Stories → Story Points
- Sprint-based execution
- Velocity calculation used for estimation

Phase 1: Requirement Analysis & Planning

Build an EventForce Management System in Salesforce to help event planners manage client bookings, vendor coordination, venue reservations, and feedback collection — all within a single CRM platform. The system automates key processes such as event scheduling, cancellation approvals, and client reminders, while providing real-time visibility through reports and dashboards.

Functional Scope:

- Custom objects (Event, Client, Vendor, Venue, Feedback, and Event Vendor (Junction Object)).
- Relationship modeling: Lookup, Master-Detail, and Many-to-Many (Event ↔ Vendor).
- Automation using Flows for reminders, feedback notifications, and approval updates.
- Validation Rules and Formula Fields to ensure accurate data entry and event budget calculation.
- Approval Processes for event cancellation requests with email alerts to coordinators and clients.
- Profiles, Roles, and Permission Sets to manage user-level access and security.
- Reports and Dashboards for event summary, vendor performance, and upcoming event insights.

Stakeholder Mapping:

- Clients: Request event services, provide feedback, and view event updates.
- Event Coordinators: Manage event scheduling, client communication, and approval workflows.
- Vendors: Handle assigned event services like catering, decor, and logistics.
- Venue Managers: Manage venue availability and reservations.
- Event Administrators: Oversee system operations, security, and data monitoring.

Execution Roadmap:

1. Object & Field Setup – Creation of Event, Client, Vendor, Venue, Feedback, and Event Vendor objects.
2. Automation Flows – Implement record-triggered flows for event reminders and approvals.
3. Validation Rules & Formula Fields – Enforce data accuracy and budget calculations.
4. Profiles, Roles, and Permission Sets – Configure user access and record visibility.
5. Approval Process – Automate event cancellation request workflow with notifications.
6. Apex Classes & Triggers – Update venue availability and prevent double bookings.
7. Reports & Dashboards – Create analytics for upcoming events and performance insights.

Phase 2: Backend Development & Configurations

The Backend & Configuration phase built the core functional engine of the EventForce Management System. Using a combination of Salesforce Flows, Apex logic, and Security configurations, this phase focused on developing the system's automation backbone to manage events, clients, vendors, venues, and feedback efficiently.

Declarative tools such as Record-Triggered Flows, Validation Rules, Formula Fields, and Approval Processes were used extensively to automate booking confirmations, reminders, and cancellation approvals. Meanwhile, Apex Classes and Triggers handled advanced business logic like venue availability updates and preventing double bookings, ensuring operational accuracy and scalability.

Pro-Code Chunking of Data 360 Search Indexes for Agentforce

Learn how pro-code chunking with Data 360 Code Extension functions gives Agentforce the right context by preserving complex tables and conversations, masking PII, and improving search indexes.

Read the guide

Data Architecture:

Created Custom objects:

- 1. Event__c
(Fields: Event Name, Event Date, Event Type, Event Status, Event Budget)
- 2. Client__c
(Fields: Client Name, Email, Phone, Address, Country, City)
- 3. Vendor__c
(Fields: Vendor Name, Email, Phone, Service Type, Status)
- 4. Venue__c
(Fields: Venue Name, Address, Location (URL), Capacity, Availability Status)
- 5. Feedback__c
(Fields: Feedback ID (Auto Number), Rating, Comments)
- 6. EventVendor__c (Junction Object)
(Links Event ↔ Vendor for Many-to-Many relationship)

Relationships:

Relationship	Type
Event → Client	Lookup
Event → Venue	Lookup
Feedback → Event	Lookup
Feedback → Client	Lookup
EventVendor → Event	Master-Detail
EventVendor → Vendor	Master-Detail

Milestone 2: Object

What is an object?

Salesforce objects are database tables that permit you to store data that is specific to an organization. It consists of fields (columns) and records (rows).

In This Application We Use 5 Custom Objects:

- 1. Event
- 2.Client
- 3.Vendor
- 4.Venue
- 5.Feedback

Activity 1: Create Event Object

To create a custom object, follow these steps:

- 1. From setup click on object manager.
- 2. Click create, select custom object.
- 3. Fill in the label as " Event ".
- 4. Fill in the plural label as " Events ".
- 5. Record name: “Event Name”

53+ Items Sorted by Label						Custom Object
LABEL	API NAME	TYPE	DESCRIPTION	LAST MODIFIED		Custom Object from Spreadsheet
Account	Account	Standard Object				
Activity	Activity	Standard Object				
Activity History	DevopsActivityLog	Standard Object				
Address	Address	Standard Object				
Agent Work	AgentWork	Standard Object				
Alternative Payment Method	AlternativePaymentMethod	Standard Object				

6. Select the data type as "Text".

The screenshot shows the 'New Custom Object' page in Salesforce Setup. The 'Custom Object Definition Edit' section is active. Under 'Custom Object Information', the 'Label' is 'Event' (Example: Account), 'Plural Label' is 'Events' (Example: Accounts), and 'Object Name' is 'Event' (Example: Account). The 'Description' field is empty. The 'Context-sensitive help setting' is set to 'Open the standard Salesforce.com Help & Training window'. The 'Context Name' is 'None'. A yellow banner at the top states: 'Permissions for this object are disabled for all profiles by default. You can enable object permissions in permission sets or by editing custom profiles. [Go to our resource](#) [Don't show this message again](#)'.

The screenshot shows the 'New Custom Object' page in Salesforce Setup, displaying the 'Optional Features' section. The 'Object Classification' section is expanded, showing settings for 'Allow Reports', 'Allow Activities', 'Track Field History', 'Allow in Chatter Groups', and 'Enable Licensing'. The 'Deployment Status' section shows 'In Development' and 'Deployed' options, with 'Deployed' selected. The 'Search Status' section shows 'Allow Search' selected. The 'Object Creation Options' section shows 'Add Notes and Attachments related list to default page layout' selected. The 'Save' button is visible at the bottom.

7. In the Optional Features section, select Allow Reports, Allow Activities and Track Field History.

8. In the Deployment Status section, ensure Deployed is selected.

9. In the Search Status section, select Allow Search.

10. In the Object Creation Options section, select Add Notes and Attachments related list to default page layout.

11. Leave everything else as is, and click Save.

Activity 2: Create Client ,Vendor,Venue,Feedback Object

1. For Client, Vendor, and Venue Objects:

- Go to **Setup** (gear icon) > **Object Manager**.
- Click **Create > Custom Object**.
- Enter the respective **Label** and **Plural Label**.
- Set **Record Name** to "[Object] Name" with a **Text** data type.
- Check **Allow Reports** and **Allow Search**.
- Select **Add Notes and Attachments related list to default page layout**.
- Click **Save**.

2. For the Feedback Object:

- Go to **Setup > Object Manager > Create > Custom Object**.
- Set **Label** to "Feedback" and **Plural Label** to "Feedbacks".
- Set **Record Name** to "Feedback" with an **Auto Number** data type (Display Format: F- {0000}, Starting Number: 0).
- Check **Allow Reports** and **Allow Search**.
- Select **Add Notes and Attachments related list to default page layout**.
- Click **Save**.

Milestone 3 - Tabs

- **Tabs in Salesforce:** Help users view information at a glance and display data of objects and other web content in the application.
- **Standard Object Tabs:** Display data related to standard objects.
- **Custom Object Tabs:** Display data related to custom objects and look and function just like standard tabs.

Activity 1: Creating a Custom Tab(Event) Now

create a custom tab.

1. Click on the Home tab, enter Tabs in Quick Find and select Tabs.

2. Under custom object tabs, click New
 3. For Object, select Event
 4. For Tab Style, select any icon.
 5. Leave all defaults as is. Click Next, Next, and Save.
-
3. For Object, select Event
 4. For Tab Style, select any icon.
 5. Leave all defaults as is. Click Next, Next, and Save

Activity 2: Creating a custom tab(Client, Vendor, Venue, Feedback)

- **Step 1:** Navigate to the **Home** tab in Salesforce Setup.
- **Step 2:** Type **Tabs** in the Quick Find box and select **Tabs**.
- **Step 3:** Under **Custom Object Tabs**, click **New**.
- **Step 4:** Select the respective object (**Client**, **Vendor**, **Venue**, or **Feedback**).
- **Step 5:** Choose your desired **Tab Style** icon.

- **Step 6:** Leave all default settings as they are, then click **Next**, **Next**, and **Save**.

Milestone 4 – Fields and Relationship

- **What are fields:** Fields in Salesforce represent what columns represent in relational databases, storing data values required for a particular object in a record.
- **Standard fields:** Four standard fields exist in every custom object: Created By, Last Modified By, Owner, and the creation timestamp. These cannot be deleted, edited, or removed.
- **Custom fields:** Fields added by administrators or developers to meet specific business requirements, which may or may not be required.

Activity 1: Creation of fields for the Event object:

- **Step 1:** Click the gear icon and select **Setup**. This launches Setup in a new tab.
- **Step 2:** Click the **Object Manager** tab next to Home.
- **Step 3:** Select **Event**.
- **Step 4:** Select **Fields & Relationships** from the left navigation, and click **New**.
- **Step 5:** Review the existing fields listed under Fields & Relationships (note that these are the standard system fields).
- **Step 6:** Choose **Picklist** as the data type and click **Next**.
- **Step 7:** For Field Label, enter **Event Type**.
- **Step 8:** Select **Enter values, with each value separated by a new line** and enter the following values:
 - Wedding
 - Festival
 - Corporate
 - Concert
 - Birth
 - Anniversary day
 - Other

- Step 9: Click Next, Next, and Save.

Fields & Relationships

☐ Currency

☐ Date

☐ Date/Time

☐ Email

☐ Geolocation

☐ Number

☐ Percent

☐ Phone

☒ Picklist

☐ Picklist (Multi-Select)

☐ Text

☐ Text Area

☐ Text Area (Long)

☐ Text Area (Rich)

☐ Text (Encrypted)

☐ Time

☐ URL

Prevents users from entering a value or value currency amounts and automatically formats the field as a currency amount. This field is used to store a price or other monetary amount.

Allows users to enter a date or pick a date from a popup calendar.

Allows users to enter a date and time, or pick a date from a popup calendar. When users click a date in the pop-up, that date and the current time are entered into the Date/Time field.

Allows users to enter an email address, which is validated to ensure proper format. If this field is specified for a contact or lead, users can choose the address when clicking Send an Email. Note that custom email addresses cannot be used for mass emails.

Allows users to define locations. Includes latitude and longitude components, and can be used to calculate distances.

Allows users to enter any number. Leading zeros are removed.

Allows users to enter a percentage number, for example, "10" and automatically adds the percent sign to the number.

Allows users to enter any phone number. Automatically formats it as a phone number.

Allows users to select a value from a list you define.

Allows users to select multiple values from a list you define.

Allows users to enter any combination of letters and numbers.

Allows users to enter up to 255 characters on separate lines.

Allows users to enter up to 131,072 characters on separate lines.

Allows users to enter formatted text, add images and links. Up to 131,072 characters on separate lines.

Allows users to enter any combination of letters and numbers and store them in encrypted form.

Allows users to enter a time zone. For example, "2:40 PM", "14:00", "14:40:00", and "14:40:50.500" are all valid times for this field.

Allows users to enter any valid website address. When users click on the field, the URL will open in a separate browser window.

Now let's create the other fields following the above Activity1 steps ,we must choose the data types of the fields carefully.

Step 1: Select **Date** as the Data Type and click Next. For Field Label, enter **Event Date**, then click Next, Next, and **Save & New**.

Step 2: Select **Picklist** as the Data Type and click Next. For Field Label, enter **Event Status**, select enter values separated by a new line, and enter the following values:

- Planned
- Confirmed
- Completed
- Pending Cancellation
- Canceled
- Rejected

Step 3: Select **Formula** as the Data Type and click Next.

Step 4: Enter the field label as **Event Budget**.

Step 5: Select **Currency** as the formula return type and click Next.

Step 6: Create and insert the formula:

```
CASE(  
  TEXT(Event_Type__c),  
  "Wedding", 50000,  
  "Corporate", 30000,  
  "Birthday", 10000,  
  "Anniversary", 20000,  
  "Festival", 60000, "Concert",  
  40000,  
  "Other", 15000,  
  0  
)
```

Step

Activity 2: Creation of fields for the Client object:

1: Select the **Email** as the Data Type, then click Next. For Field Label **Email**, click Next, Next, then **Save & New**.

Step 2: Select the **Phone** as the Data Type, then click Next. For Field Label **Phone**, click Next, Next, then **Save**.

Step 3: Select the **Text Area** as the Data Type, then click Next. For Field Label **Address**, click Next, Next, then **Save**.

Step 4: Select the **Picklist** as the Data Type, then click Next. For Field Label **Country**, select **Enter values, with each value separated by a new line** and enter the following values:

- India ● Sri Lanka
- Philippines ● Bangkok
- Saudi Arabia ● Singapore
- USA ● Myanmar
- Switzerland ● France
- Thailand ● Nepal
- Maldives
- Dubai

Step 5: Click **Save**.

Step 6: Select the **Picklist** as the Data Type, then click Next. For Field Label **City**, select **Enter values, with each value separated by a new line** and enter the following values:

- Hyderabad ● Dammam
- Mumbai ● Medina
- Delhi ● New York
- Bangalore ● Los Angeles
- Chennai ● Chicago
- Alaminos ● Houston
- Angeles City ● Columbus

Step

- Palayan
- Quezon City
- San Juan
- Riyadh
- Jeddah
- Tayma
- Geneva
- Basel
- Lausanne
- Bern
- Lucerne

7: Click **Save**.

Activity 3: Creation of fields for the Vendor object:

- **Step 1:** Select the **Multi-Select Picklist** as the Data Type, then click Next. For Field Label **Service Type**, select **Enter values, with each value separated by a new line** and enter the following

values:

- Catering
- Decor
- Photography
- Videography
- Lighting
- Stage Setup
- Makeup Artist
- DJ/Music
- Transportation
- Hosting/Anchor

- **Step 2:** Select the **Email** as the Data Type, then click Next. For Field Label **Email**, click Next,

Next, then **Save & New**.

- **Step 3:** Select the **Phone** as the Data Type, then click Next. For Field Label **Phone**, click Next,

Next, then **Save**.

- **Step 4:** Select the **Picklist** as the Data Type, then click Next. For Field Label **Status**, select **Enter values, with each value separated by a new line** and enter the following values:

- Available
- Booked
- Cancelled

Relationships:

Activity 1:Creation lookup relationship

- **Event Relationships:**
- Create a Lookup relationship on the Event object linking to Venue.
- Create a Lookup relationship on the Event object linking to Client.
- **EventVendor Junction Object:**
- Create a junction object named `EventVendor__c`.
- Establish Master-Detail relationships to both Event and Vendor for many-to-many associations.
- **Feedback Relationships:**
- Create a Lookup relationship on the Feedback object linking to Event.
- Create a Lookup relationship on the Feedback object linking to Client.
- **Feedback Lookup Filter:**
- Go to the Feedback object's Event field settings and enable the filter.
- Set the criteria where the Event's client field equals the Feedback record's client field.
- Save changes.

Milestone 5 - Validation Rules

Validation rules are applied when a user tries to save a record and are used to check if the data meets specified criteria. If the criteria are not met, the validation rule triggers an error message and prevents the user from saving the record until the issues are resolved.

Activity 1: Create Validation Rules on Client__c :

- 1.Go to the setup page → click on object manager → type object name(Client) in quick find box,

click on the Client object

2. Click on the validation rule → click New.

3. Enter the Rule name as “Email_Valid_Address”.

4. Select Active

5. Insert the Error Condition Formula as : -

NOT(REGEX(Email__c, "^[a-zA-Z0-9._]+@[a-zA-Z0-9]+\.[a-zA-Z]{2,}\$"))

6. Set the error message to "Please Enter Valid Email Address", choose the **Email** field as the error

location, and click **Save**

The screenshot shows the Salesforce Setup interface. At the top, there's a 'Developer Edition' badge and a search bar labeled 'Search Setup'. Below the navigation bar, the 'Object Manager' tab is selected. The main content area is titled 'Client Validation Rule' with a 'Back to Client' link. Under 'Validation Rule Detail', there are 'Edit' and 'Clone' buttons. The rule details are as follows:

Rule Name	Email_Valid_Address	Active	✓
Error Condition Formula	NOT(REGEX(Email__c, "^[a-zA-Z0-9._]+@[a-zA-Z0-9]+\.[a-zA-Z]{2,}\$"))		
Error Message	Please Enter Valid Email Address	Error Location	Email
Description			
Created By	Pakalavan B. 10/1/2026, 11:17 PM	Modified By	Pakalavan B. 10/1/2026, 11:17 PM

At the bottom, there are 'Edit' and 'Clone' buttons.

Milestone 6: APPROVAL PROCESS

Activity 1: Create an Approval Process for Event Cancellation Approval Note: Before Implementing Approval Process first Complete Profiles, Roles and Users Milestones.

1. Create Classic Email Template

1. Go to Setup (gear icon on top-right)

2. In the Quick Find box, type: Email Templates

3. Click on Classic Email Templates

4. Click "New Template"

5. You'll now choose the type of email template you want to create.

Choose the type:

- Text – Plain text (no formatting)
- Click Next

6. Email Template Information:

Folder	Public or private folder (use "Unfiled Public Email Templates" for now)
Email Template Name	Event Cancellation Request Notification
Template Unique Name	Auto-filled, or change it (no spaces)
Encoding	Leave default (UTF-8)
Subject	Approval Request: Cancel Event {!Event__c.Name}

Email Body	Hello! An approval request has been submitted to cancel the event: - Event Name: {!Event__c.Name} - Event Date: {!Event__c.Event_Date__c} Thank you, EventForce Management System

Description

Subject Event Cancellation Notice – {!Event__c.Name}

Email Body

```

Hello!
We would like to inform you that the event has been canceled.
Event Name: {!Event__c.Name}
Date: {!Event__c.Event_Date__c}
If you have any questions or need assistance, please contact us.
Thank you for your understanding,
Event Management Team

```

- **Email to Client After Cancellation:** Notifies clients upon cancellation approval with the subject "Event Cancellation Notice – {!Event__c.Name}".
- **Approval Notification to Event Owner:** Alerts the event owner when a cancellation request is approved with the subject "Event Cancellation Approved: {!Event__c.Name}" and confirms the status update to Canceled.
- **Rejection Notification to Event Owner:** Informs the owner if a cancellation is rejected with the subject "Event Cancellation Rejected: {!Event__c.Name}" noting that the status has reverted to Confirmed.

5. Create the Approval Process

1. **Open Approval Processes:** Go to Setup, search for and open **Approval Processes**, select the **Event** object, and click **Create New Approval Process** using the Standard Setup Wizard.
2. **Basic Settings:** Name the process `Event_Cancellation_Process` and click Next.
3. **Set Entry Criteria:** Choose "Criteria are met", set **Event Status** to equal Pending Cancellation, and click Next.
4. **Select Approver:** Set the approver to automatically assign to the manager of the record submitter, and click Next.
5. **Select Email Template:** Choose the Event Cancellation Request Notification template, and click Next.
6. **Choose Layout Fields:** Select the key fields to display on the approval page (such as Event Name, Owner, Client, and Event Status) and click Next.
7. **Specify Submitters:** Set **Event Owner** as the initial submitter and click Save.
8. **Configure Initial Submission Actions:** Add an Email Alert notifying the Event Coordinator role using the cancellation request template.
9. **Configure Final Approval Actions:**
 - Add a Field Update to change **Event Status** to Canceled.
 - Add an Email Alert to notify the event owner of approval.
10. **Configure Final Rejection Actions:**
 - Add an Email Alert to notify the event owner of rejection.
 - Add a Field Update to change **Event Status** to Rejected.
11. **Add Approval Step:** Create a new step named Manager Review, select "All records should enter this step", assign the approver, and save.
12. **Activate:** Go to the approval process detail page and click **Activate**.

Milestone 7 - Flows

In Salesforce, a flow is a powerful tool that allows you to automate business processes, collect and update data, and guide users through a series of screens or steps. Flows are built using a visual interface and can be created without any coding knowledge.

Activity 1 : Create Flow to Send 3-Day Reminder Email to Client Scenario:

When an Event is created/updated with Status = Confirmed and a valid Client with an email address, the system should automatically send a reminder email to the Client 3 days before the Event Date.

The screenshot shows the Salesforce Setup page. The left sidebar has a navigation menu with 'Setup' selected. The main content area shows the 'Flows' section. At the top, there's a 'Flow Trigger Explorer' and a 'New Flow' button. Below that, there's a 'Flow Definitions' section with a dropdown menu set to 'All Flows'. A table lists various flow definitions.

Flow Label	Process Type	Activated	Test	Package State	Packaging	Last Modified	Last Modified By
Add Case Comment	Autolaunched Flow	☒	☐	Managed-Installed			
Add or Modify Service Appointment Attendees	Salesforce Scheduler Flow	☒	☐	Managed-Installed			
Approvals Workflow: Evaluate Approval Requests	Screen Flow	☒	☒	Managed-Installed			
Approvals Workflow: Process Approval Submission	Screen Flow	☒	☐	Managed-Installed			
Authentication Provider User Registration	Identity User Registration Flow	☐	☒	Managed-Installed			
Basic Approval Request	Flow Orchestration for CMS	☒	☒	Managed-Installed			

- **Step 1:** Go to Setup, type "Flow" in the Quick Find box, click on **Flows**, and select **New Flow**.
- **Step 2:** Select **Record-Triggered Flow** and click **Create**.
- **Step 3:** Under Object, select **Event**.
- **Step 4:** Select **A record is created or updated**.
- **Step 5:** Enter condition:
 1. **Field:** Event Status
 2. **Operator:** Equals
 3. **Value:** Confirmed
- **Step 6:** Select **Optimize the flow for:** "Actions and Related Records" and click **Done**.
- **Step 7:** Click on the Start button, and click **Add Schedule Path**.

- **Step 8:** Enter Path name as **3_Days_Before** (API name automatically populates).
- **Step 9:** Select Time Source as **Event__c: Event Date**.
- **Step 10:** Enter Offset Number: **3**.
- **Step 11:** Select Offset Options: **Days Before**, and click the 'x' icon.
- **Step 12:** Select Toolbox from the top left corner, and click **New Resource**.
- **Step 13:** Select **Text Template**.
- **Step 14:** Enter API Name: **Subject**.
 1. In the Body, enter: Reminder: Your Event {!\$Record.Name} is in 3 days
 2. Select **View as Plain Text**.
 3. Click **Done**.
- **Create another Resource:**
 1. Select **Text Template**.
 2. Enter API Name: **Body**.
 3. In the Body, enter:

Hello {!\$Record.Client__r.Name},

This is a reminder that your event "{!\$Record.Name}" will take place on

{!\$Record.Event_Date__c}.

Venue: {!\$Record.Venue__r.Name}

Type: {!\$Record.Event_Type__c}

We look forward to seeing you!

- EventForce Team
 3. Select **View as Plain Text**.
 4. Click **Done**.
- **Step 1 (Action):** Under the 3 Days Before path, click the + symbol and select **Action** from the dropdown list.
- **Step 2 (Action):** After clicking Action, select **Email Action**.
- **Step 3 (Action):** Search for **Send Email**, and click on it.
- **Step 4 (Action):** Enter the label name as **Alert_Client_3Day_Reminder**.
- **Step 5** Select the Recipient Address List as Client Email.
- **Step 6** Select the CC Recipient Address List : Event Owner
- **Step 7:** In **Configure Email Content**, select **Compose Email Content**.

- **Step 8:** For **Subject**, select the **Subject Resource**.
- **Step 9:** For **Body**, select the **Body Resource**.
- **Step 10:** Click **Save**.
- **Step 11:** Enter the Flow Label as **Client Reminder - 3 Days Before**, then click **Save & Activate**.

Milestone 8 – Apex Classes

Activity1: Scenario: When an Event is created with a Venue, mark Venue

Availability = “Reserved”. When event is cancelled, mark “Available”

- **Step 1:** Click the **Gear Icon** and select **Developer Console**.
- **Step 2:** Click on **File**, select **New**, and click on **Apex Class**.
- **Step 3:** Give the name as **VenueStatusHelper** and click **OK**.
- **Step 4:** Write your Apex Class Code:

```
public with sharing class VenueStatusHelper {    public static  
  
    void updateVenueStatus(List<Event__c> events){  
  
        List<Venue__c> venues = new List<Venue__c>();  
  
        for(Event__c ev : events){            if(ev.Venue__c != null){  
  
            if(ev.Event__Status__c == 'Confirmed'){  
  
                venues.add(new Venue__c(Id=ev.Venue__c,  
  
                Availability_Status__c='Reserved'));  
  
                } else if(ev.Event__Status__c == 'Canceled'){  
  
                venues.add(new Venue__c(Id=ev.Venue__c,  
  
                Availability_Status__c='Available'));  
  
                }  
  
            }  
  
        }  
  
        if(!venues.isEmpty()) update venues;  
  
    }  
  
}
```

- **Step 5:** Save the class using **CTRL + S**.
- **Step 6:** Create the trigger by clicking on **File**, selecting **New**, and clicking on **Apex Trigger**.
- **Step 7:** Give the name as **EventTrigger13** and select Object: **Event__c**, then click **Submit**.
- **Step 8:** Write your Apex Trigger Code:

```
trigger EventTrigger13 on Event__c (after insert, after update) {
    VenueStatusHelper.updateVenueStatus(Trigger.new);
}
```

Milestone 9 – Apex Trigger

Activity1: Scenario: Do not allow two events at the same Venue on the same Date.

Create an Apex Trigger:

- **Step 1:** Click on **File**, select **New**, and click on **Apex Trigger**.
- **Step 2:** Give the name as **PreventDoubleBooking** and select Object: **Event__c**, then click **Submit**.
- **Step 3:** Write your Apex trigger code:

```
trigger PreventDoubleBooking on Event__c (before insert, before update) {
    Set<Id> venueIds = new Set<Id>();    for(Event__c ev : Trigger.new){
    if(ev.Venue__c != null) venueIds.add(ev.Venue__c);
    }

    Map<Id, List<Event__c>> venueEventMap = new Map<Id, List<Event__c>>();
    for(Event__c e : [SELECT Id, Venue__c, Event_Date__c FROM Event__c WHERE
    Venue__c IN :venueIds]){
        if(!venueEventMap.containsKey(e.Venue__c)){
            venueEventMap.put(e.Venue__c, new List<Event__c>());
        }

        venueEventMap.get(e.Venue__c).add(e);
    }

    for(Event__c ev : Trigger.new){
        if(ev.Venue__c != null &&
        venueEventMap.containsKey(ev.Venue__c)){
            for(Event__c existing :
```

```

venueEventMap.get(ev.Venue__c)){
    if(existing.Event_Date__c ==
    ev.Event_Date__c && existing.Id != ev.Id){
        ev.addError('This Venue
is already booked on this date.');
```

- Step 4: Save the trigger using CTRL + S.

Milestone 10: Batchable and Schedulable Asynchronous Apex

Step 1: Create Batch Apex Class

- Click the **Gear Icon** and select **Developer Console**.
- Click on **File**, select **New**, and click on **Apex Class**.
- Give the name as **BatchCompleteEvents** and click **OK**.
- Write your Apex Class code:

Source Code:

```

    global class BatchCompleteEvents implements
    Database.Batchable<sObject> {
    global Database.QueryLocator start(Database.BatchableContext bc){
    return Database.getQueryLocator(
    'SELECT Id, Event_Date__c, Event_Status__c FROM Event__c WHERE Event_Date__c <
    TODAY AND Event_Status__c != \'Completed\'
    );
    }
    global void execute(Database.BatchableContext bc, List<Event__c> scope){
    for(Event__c ev : scope){
        ev.Event_Status__c = 'Completed';
```

```

    }

    update scope;
}

global void finish(Database.BatchableContext bc){

    System.debug('Past events marked as Completed');

}

}

```

- .Save the class using CTRL+S

Step 2: Schedulable class Implementation:

- Click the **Gear Icon** and select **Developer Console**.
- Click on **File**, select **New**, and click on **Apex Class**.
- Give the name as **ScheduleCompleteEvents** and click **OK**.
- Write your Apex Class code:

Source Code:

```

global class ScheduleCompleteEvents implements Schedulable {

    global void execute(SchedulableContext sc){

        Database.executeBatch(new BatchCompleteEvents(), 200);

    }

}

```

- Save the class using CTRL + S.

Step 3: Schedule Batch Apex from Salesforce Setup

- **Step 1: Go to Setup**
- Click the gear icon → **Setup**.
- **Step 2: Search for Apex Classes**
- In the Quick Find box, type **Apex Classes**.
- Click **Apex Classes**.
- **Step 3: Schedule Apex**

- On the top, click the **Schedule Apex** button.
- **Step 4: Enter Job Details**
- **Job Name:** Daily Event Completion
- **Apex Class:** Select **ScheduleCompleteEvents** (the schedulable class you created).
- **Step 5: Set Schedule Time**
- **Frequency:** Weekly or Monthly → Choose **Weekly**.
- **Days:** Select **All Days**.
- **Preferred Start Time:** Select **08:00 PM**.
- **Step 6: Save**
- Click **Save** → Your job is now scheduled.

Phase 3: UI/UX Development & Customization

- **UI/UX Purpose:** Focuses on creating a simple, user-friendly interface for the EventForce Management

System.

- **Lightning App Integration:** Includes the creation of a custom Lightning App in Salesforce to organize and

access all modules—such as Events, Clients, Vendors, Venues, and Feedback—from a single workspace.

- **Analytics & Visualization:** Reports and dashboards were developed to visualize event schedules, vendor performance, and client feedback.
- **Key Operational Reports:** Reports like "Upcoming Events by Month" are used for analytical tracking,

while the "EventForce Operations Dashboard" provides a clear visual summary of key business metrics.

- **Responsive Experience:** Ensures a responsive and data-driven user experience, allowing users to manage

and monitor event operations efficiently through Salesforce's Lightning interface.

Milestone 11 - The Lightning App

What is an App ?

Apps in Salesforce are a group of tabs that help the application function by working together as a unit. It has a name, a logo, and a particular set of tabs. The simplest app usually has just two tabs.

1. **Open App Manager:** From Setup, enter "App Manager" in the Quick Find box and select **App Manager**.
2. **Create New App:** Click **New Lightning App**, enter **Event Planner** as the App Name, optionally upload an image, and click **Next**.
3. **App Options & Utility Items:** Leave the default selections under App Options and Utility Items, clicking **Next** on both screens.
4. **Select Navigation Items:** From Available Items, select **Event, Client, Vendor, Venue, Feedback, Reports, and Dashboards**, move them to Selected Items, and click **Next**.
5. **Assign Profiles:** From Available Profiles, select **System Administrator**, move it to Selected Profiles, and click **Save & Finish**.
6. **Verify App:** Click the App Launcher, type **Event Planner**, and select the app to verify your changes.

Milestone 12: Reports

1. Create a Report Folder

1. Open **Reports** from the App Launcher.
2. Click **New Folder**, enter the label **EventForce Report**, and click **Save**.

2. Share the Report Folder

1. In the Reports tab, go to **All Folders**.
2. Click the dropdown menu next to **EventForce Report** and select **Share**.
3. Share with the roles **Event Coordinator** and **Vendor Manager**, grant **View** access, then click **Share** and **Done**

3. Create "Upcoming Events by Month" Report

1. Go to **Reports** and click **New Report**.
2. Select **All** categories, search for **Events** (or **Events with Client & Venue**), and click **Start Report**.
3. In the outline pane, add the columns: Event Name, Event Date, Event Type, Client, Venue, and Event Budget.
4. Apply the following filters:
 - **Show Me: All Events**

- **Event Date:** $\geq$ TODAY (or Next 30 Days) ● **Event Status:** $\neq$

Canceled

5. Under **Group Rows**, select **Event Date** **Group by Calendar Month**.
6. Under **Summarize**, enable **SUM** for Event Budget.
7. Click **Add Chart** (Column or Line) setting the X-axis to Event Date (Calendar Month) and Y-axis to Row Count or SUM(Event Budget).
8. Click **Save**, name the report **Upcoming Events by Month**, choose the **EventForce Reports** folder, and click **Save & Run**.

Milestone 13 - Dashboards

- **Step 1:** Click on the **Dashboards** tab from the EventForce Management System application.
- **Step 2:** Click on **New Dashboard**.
- **Step 3:** Give name – **EventForce Operations Dashboard**.
- **Step 4:** Click **Create**.
- **Step 5:** Click on + **Widget**.
- **Step 6:** Select the **Upcoming Events by Month Report**.
- **Chart:** Donut Chart
- **Max Values Displayed:** 6
- **Subtitle:** Upcoming Events Overview
- **Widget Theme:** Light ● Click **Save**.

Phase 4: Data Migration, Testing & Security

- **Data Migration:** Imported records for Events, Clients, Vendors, Venues, and Feedback using the Data Import Wizard after pre-validation checks to prevent duplicates and maintain consistency.

- **User Management:** Created user accounts for the Event Admin, Event Coordinator, Vendor Manager, and

Client, assigning specific profiles and roles aligned with their access levels.

- **Security & Access Control:** Set Organization-Wide Defaults (OWD) to Private and configured role hierarchies, permission sets, and sharing rules (such as Event_Sharing_For_Vendors) to ensure secure data

visibility.

- **Testing & Quality Assurance:** Validated data accuracy, automation performance, and user permissions to

confirm the system is secure, reliable, and fully functional for operations.

Milestone 14 - Profile

A profile in Salesforce is a collection of settings and permissions that define what a user can see and do (such as object permissions, field permissions, tab settings, and login hours). Every user can be assigned only one profile at a time.

Steps to Create Custom Profiles

1. Create the "Event Admin" Profile

1. From Setup, type "Profiles" in the Quick Find box and select **Profiles**.
2. Click **New Profile**.
3. Select **System Administrator** as the existing profile to clone.
4. Enter the Profile Name as
5. Event Admin
6. and click **Save**. (*Cloning this base profile grants full administrator access*).

2. Create the "Event Coordinator" Profile

1. From Setup, go to **Profiles** and click **New Profile**.
2. Select **Standard Platform User** as the existing profile to clone.
3. Enter the Profile Name as
4. Event Coordinator
5. and click **Save**.
6. Click **Edit** and set the default custom app to **Event Planner**.
7. Assign custom object permissions:
 - **Event:** Create, Read, Edit, Delete (CRED)
 - **Client:** Read / Edit
 - **Vendor & Venue:** Read
 - **Feedback:** Create / Read
8. Update security policies: set session timeout after 2 hours of inactivity, set password expiration to "never expires", and set minimum password length to 8. Click **Save**.

3. Create the "Vendor Manager" Profile

1. From Setup, go to **Profiles** and click **New Profile**.
2. Select **Standard Platform User** as the existing profile to clone.
3. Enter the Profile Name as
4. Vendor Manager
5. and click **Save**.
6. Click **Edit** and set the default custom app to **Event Planner**.

7. Assign custom object permissions:

- **Vendor:** Create, Read, Edit, Delete (CRED)
- **Event, Venue, Client, & Feedback:** Read Only

8. Update security policies: set session timeout after 2 hours of inactivity, set password expiration to "never expires", and set minimum password length to 8. Click **Save**.

4. Create the "Client Profile"

1. From Setup, go to **Profiles** and click **New Profile**.

2. Select **Standard Platform User** as the existing profile to clone.

3. Enter the Profile Name as

4. Client Profile

5. and click **Save**.

6. Click **Edit** and set the default custom app to **Event Planner**.

7. Assign custom object permissions:

- **Event:** Read Only (for their own events)
- **Feedback:** Create / Read
- **Vendor & Venue:** No Access

8. Update security policies: set session timeout after 2 hours of inactivity, set password expiration to "never expires", and set minimum password length to 8. Click **Save**.

Milestone 15 - Role

1. **Navigate to Roles:** From the Quick Find box in Setup, search for and select **Roles**, then click **Set Up Roles**.
2. **Create Event Admin Role:** Click **Expand All**, select **Add Role** under CEO, enter the label **Event Admin**, and click **Save**.
3. **Create Event Coordinator Role:** Under the **Event Admin** role, click **Add Role**, enter the label **Event Coordinator**, and click **Save**.
4. **Create Vendor Manager Role:** Under the **Event Admin** role, click **Add Role**, enter the label **Vendor Manager**, and click **Save**.
5. **Create Client Role:** Under the **Event Admin** role, click **Add Role**, enter the label **Client**, and click **Save**.

Milestone 16 - User

A **user** is anyone who logs in to Salesforce. Every user has a unique account that defines their identity and controls what features and records they can access. **Steps to Create Users**

1. Create Admin User

1. From **Setup**, search for **Users** in the Quick Find box and select **Users**.
2. Click **New User**.
3. Fill in required user details (First/Last Name, Alias, Personal Email, Unique Username formatted as text@text.text, and Nickname).
4. Assign settings:
 - **Role:** Event Admin
 - **User License:** Salesforce
 - **Profile:** Event Admin
5. Click **Save**.

2. Create Additional Users

1. Repeat the process to create users for **Event Coordinator**, **Vendor Manager**, and **Client**.
 2. Assign settings for each:
 - **Role:** Match the user's role (Event Coordinator, Vendor Manager, or Client)
 - **User License:** Salesforce Platform
 - **Profile:** Match the corresponding profile (Event Coordinator, Vendor Manager, or Client Profile)
- Click **Save**.

The screenshot shows the Salesforce Setup interface. The left sidebar contains a navigation menu with 'Users' selected. The main content area displays the 'Users' management page. At the top, there are buttons for 'New User', 'Reset Password(s)', and 'Add Multiple Users'. Below these is a table of existing users with the following columns: Action, Full Name, Alias, Username, Role, Active, and Profile. The table lists several users, including B. Pakalavan, Baskar. Pakalavan, Chatter Expert, EPIC. OrgFarm, Kumar. Dharun, Kumar. Ravi, User. Integration, and User. Security. Each user has an 'Edit' link in the Action column. The Role column shows roles like System Administrator, Event Admin, Event Coordinator, and Vendor Manager. The Profile column shows profiles like System Administrator, Event Admin, Chatter Free User, System Administrator, Event Coordinator, Vendor Manager, Analytics Cloud Integration User, and Analytics Cloud Security User.

Action	Full Name	Alias	Username	Role	Active	Profile
☐ Edit	B. Pakalavan	pak	pakalavan005_e4d1c97d001f@agentforce.com		✓	System Administrator
☐ Edit	Baskar. Pakalavan	pakalava	pakalavan005@gmail.com	Event Admin	✓	Event Admin
☐ Edit	Chatter Expert	Chatter	chatter.00df00000j0leaa.u7d3f9vkhig@chatter.salesforce.com		✓	Chatter Free User
☐ Edit	EPIC. OrgFarm	OEPIK	epic.d87a90d28724@orgfarm.salesforce.com		✓	System Administrator
☐ Edit	Kumar. Dharun	dkuma	dharun@sfd123@gmail.com	Event Coordinator	✓	Event Coordinator
☐ Edit	Kumar. Ravi	rkuma	ravi005@sfd1@gmail.com	Vendor Manager	✓	Vendor Manager
☐ Edit	User. Integration	integ	integration@00df00000j0leaa.com		✓	Analytics Cloud Integration User
☐ Edit	User. Security	sec	insightssecurity@00df00000j0leaa.com		✓	Analytics Cloud Security User

Milestone 17: Permission Set

A **permission set** in Salesforce is a collection of settings and permissions that grant access to specific tools, features, and objects without changing a user's profile.

Steps to Create and Assign a Permission Set:

1. **Open Permission Sets:** From Setup, type **Permission Sets** in the Quick Find box, select **Permission Sets**, and click **New**.
2. **Name the Permission Set:** Enter the Label as **Feedback Manager** and click **Save**.
3. **Configure Object Permissions:** Click **Object Settings**, search for and select the **Feedback** object, and click **Edit**.
4. **Grant Permissions:** Enable **Read, Create, Edit, and Delete (RCED)** permissions for the Feedback object, and click **Save**.
5. **Assign Users:** Click **Manage Assignments**, then click **Add Assignment**.
6. **Complete Assignment:** Select the user with the **Event Coordinator** role, click **Next**, and click **Assign**.

Milestone 18: Sharing Settings

1. **Configure OWD:** Go to Setup, search for **Sharing Settings**, and click **Edit**. Locate the **Event** object under Organization-Wide Defaults, change both Default Internal Access and Default External Access to **Private**, and click **Save**.
2. **Create Sharing Rule:** Scroll down to the Event sharing rules section, click **New**, and name the rule
3. Event_Sharing_For_Vendors
4. Set the rule to share records owned by members of **Roles >> Event Coordinator** with **Roles >> Vendor Manager**, set the access level to **Read Only**, and click **Save**.

Phase 5 : Deployment, Documentation & Maintenance

Deployment :

- **Deployment Scope:** All configurations, customizations, and automations were built and tested within a Salesforce Developer Edition Org.
- **Phase Objective:** To understand how a real-world Salesforce CRM solution is prepared for deployment after complete configuration, testing, and security setup.
- **Why Actual Production Deployment is Omitted:**
- Developer Edition orgs are standalone environments and not connected to production instances.
- Real deployments require sandbox environments, change sets, or Salesforce DevOps tools (like GitHub CI/CD pipelines or Salesforce DX), which are used in enterprise-level implementations.

- **Focus of the Phase:** Simulating the deployment process to ensure that all metadata—objects, fields, flows, Apex, and dashboards—are properly structured, version-controlled, and ready for migration when needed.

Maintenance, Monitoring & Troubleshooting :

- **Maintenance Activities:** Ensure that event, client, vendor, and feedback data remain accurate and up to date.
- **Monitoring:** Regular monitoring of flows, Apex jobs, and approval processes helps identify potential issues or failed automations early.
- **Troubleshooting Involves:**
 - Resolving user-access errors and permission conflicts.
 - Debugging Apex triggers and flow logic.
 - Adjusting validation rules or sharing settings as business needs evolve.
- **Real-World Replication:** Although implemented in a Developer Org for academic purposes, these practices replicate real-world CRM management, ensuring long-term stability, scalability, and trust within the Salesforce ecosystem

Functional & Performance Testing

- Validated end-to-end functionality including record management, real-time Apex validation, scheduled Flows, and dashboard analytics. All execution benchmarks passed with low latency.

Strategic Advantages & Limitations

- **Key Advantages:** Centralized data governance, process automation, automated double-booking prevention, multi-step approvals, executive visibility dashboards, and robust enterprise security.
- **Implementation Limitations:** Developed in a Developer Edition org with production migration, CI/CD pipelines, and ongoing maintenance overhead outside immediate scope..

Future Scope & Strategic Roadmap

- **Enterprise Migration:** Deploy via Salesforce DX and CI/CD.
- **Integrations:** Connect payment gateways, calendar systems, and e-signature tools via APIs.
- **Advanced AI:** Add Einstein Analytics for predictive trends and vendor scorecards.
- **Mobile & Portals:** Optimize mobile Lightning components and launch Experience Cloud portals

Appendix

- **Appendix A: Custom Data Architecture** — Object structures for Event__c, Client__c, Vendor__c, Venue__c, EventVendor__c (Junction Object), and Feedback__c.
- **Appendix B: Business Logic & Automation** — Declarative Flows, Field-Level Validation Rules, Event Cancellation Approval Processes, Apex Triggers, and Helper Classes.
- **Appendix C: Asynchronous Processing** — Implementation details for Batch Apex and Scheduled Apex jobs handling automated event completions.
- **Appendix D: Security & Access Control Framework** — Configuration logs for Profiles, Role Hierarchies, Permission Sets, Organization-Wide Defaults (OWD), and Sharing Rules.
- **Appendix E: Data Management** — Field mapping templates and execution logs for data loading via the Salesforce Data Import Wizard.
- **Appendix F: User Interface & Analytics** — Custom Lightning App layouts, operational Reports, and real-time Management Dashboards.
- **Appendix G: Quality Assurance & Technical Documentation** — Test execution plans, security matrix tests, automation logs, and functional test result documentation.

Conclusion

The EventForce Management System successfully demonstrates how the Salesforce CRM platform can be architected to centralize, streamline, and automate end-to-end event planning operations. By unifying core entities—Events, Clients, Vendors, Venues, EventVendor assignments, and Feedback—into a cohesive relational database, the project eliminates manual overhead and data silos.

Through a strategic blend of declarative tools and programmatic enhancements, the solution solves complex business problems including double-booking prevention, automated reminder delivery, and governance-backed cancellation handling. Adhering to enterprise best practices for security, testing, and operational reporting, it establishes a scalable blueprint ready for future production deployment.
